As many producers are aware Huron Bay as well as other feed suppliers will not be able to sell medications such as Penicillin over the counter.

This includes the following;

- Scour Pills,
- Injectable Penicillin,
- Powdered soluble of Penicillin or Oxytetracycline, -Injectable Oxytetracycline,
- Sulfamethazine Solutions.

There are still multiple ways to protect your animals with different items we sell,

### **Milk Replacers**

-**Growth Spurt** milk replacer with **Deccox** is available. The **deccox** helps prevent Coccidia in young calves getting them off to the proper start they need to grow strong and healthy.

-**Amplifier Max** milk replacer has been a staple in many stores for a number of years now and for good reason, it contains **Organic Trace Minerals and Bio-MOS** which help promote healthy growth by reducing stress and enhancing the immune system.

### **Probiotics**

-**Stockmans Choice** is a vitamin and enzyme additive to top dress on feed in times when additional nutrients are needed. Stockmans Choice achieves this by maintaining the microbial balance in the gut which improves feed intake and efficiency as well as assisting in digestion. The paste is available in 80g or 300g. **300g-Reg:\$64.30, Sale:\$54.30, SAVE \$10.**  
**80g-Reg\$18.99, Sale\$16.99, SAVE \$2.**

-**Actigen** is a feed additive produced from yeast cell walls, it is considered a 'second generation' product to Bio-MOS. Actigen improves feed intake, binds pathogenic bacteria, promotes good gut health, and improves the immune status of animals which it is fed to. Actigen can be used to prevent scour causing bacteria in calves. They have also been linked to better calf respiratory health and better immune transfer from cows to calves in colostrum. Actigen is easily added to premix for efficiency when feeding, speak to your Huron Bay Rep to add Actigen today!

**ACTIGEN®**
